Skills

Flutter and React Native

- API Development
- RESTful Services
- Cloud Integration
- Cloud Deployment
- Team Collaboration
- Database Design
- Microservices Architecture
- C# and ASP.net
- Nest Js
- Express JS and Typescript Js
- Git and GitHub

Innovative Co-Founder and Backend Developer with expertise in Full Stack and Mobile Application Development. Skilled in integrating front-end and back-end technologies to enhance user experience. Committed to collaborating on impactful projects and driving technological advancement.

Work history

2026-01 -
Current

Co-Founder & Backend Developer

Jivy Contract, Lagos, Nigeria

- Architected and developed the entire backend infrastructure of Jivy Contract, a fintech escrow payment platform built for Nigeria's freelance and contract economy
- Designed and implemented a secure escrow payment system that holds funds before work begins and releases them upon milestone approval, protecting both clients and freelancers
- Built RESTful APIs for core platform features including contract creation, milestone tracking, payment processing, fund locking and release workflows
- Developed an AI-powered contract condition suggestion engine integrating the Anthropic Claude API to generate smart, project-specific contract conditions for non-technical users
- Implemented user authentication, authorisation and role-based access control for clients, freelancers and admin users
- Built an admin dashboard backend with real-time platform metrics including contract volumes, escrow values, platform fees, withdrawal management and user analytics
- Designed and managed the database schema for contracts, milestones, transactions, users and dispute records.

2025-10 -
2026-02

Mobile Application Developer

Artsipify, Lagos, Nigeria

- Developed user-friendly mobile applications for iOS and Android platforms using Flutter Frameworks
- Collaborated with cross-functional teams to define app features and functionality.
- Implemented APIs and integrated third-party services to enhance application performance.
- Enhanced app performance for a smoother user experience by optimizing code and troubleshooting issues.
- Maintained up-to-date knowledge of emerging trends in mobile technology, applying best practices to app development projects consistently.

2025-10 -
2026-01

Backend Developer

Nesi Home Care, Lagos

- Designed and developed scalable backend services using **Node.js and TypeScript** to support **2 mobile applications and 1 web platform** in the healthcare domain.
- Built and maintained **RESTful APIs** for user onboarding, caregiver registration, booking management, and service scheduling.

Languages

English

- Implemented **caregiver assignment and scheduling logic**, ensuring caregivers are allocated based on availability and booking dates.
- Developed **location-based check-in and check-out validation**, restricting caregivers to confirm attendance only when physically near the patient.
- Engineered backend services for an **admin dashboard**, enabling administrators to assign caregivers, activate/deactivate caregivers, manage bookings, and oversee platform operations.
- Integrated **payment processing workflows**, handling booking payments, transaction status tracking, and payment validation.
- Implemented **authentication and role-based authorization** for users, caregivers, and administrators.
- Designed database schemas and optimized queries to support booking history, attendance logs, and payment records.

2025-09 -
2026-01

Full stack developer

Jivy Logistics, Alimosho

- Developed backend services for **Jivy Logistics**, a campus-focused delivery platform, using **NestJS** and **MongoDB** to support scalable order and logistics management.
- Built APIs for **real-time delivery tracking**, parcel management, and vendor integrations tailored for campus logistics.
- Integrated **payment processing** (with webhook support and transaction verification) to handle orders and ensure seamless checkout experiences.
- Enhanced **backend performance**, implemented **error monitoring and logging**, and maintained **production-ready deployment pipelines**.
- Collaborated with the frontend team to ensure smooth **API design, data flow, and user experience** for fast campus deliveries.

2025-08 -
2026-01

Backend Developer

Jivy Pay, Lagos, Nigeria

- Designed and built a **scalable backend architecture** using **NestJS** with a modular, domain-driven structure for wallets, transactions, roles, and approvals.
- Implemented **role-based access control (RBAC)** to manage fine-grained permissions for staff, including spend, view, and approval rights.
- Developed a **multi-wallet system** enabling businesses to create purpose-based wallets (expenses, payroll, branch operations) with configurable rules.
- Built **transaction rule enforcement** (per-transaction limits, daily limits, and time-based access controls) applied at the API and database levels.
- Designed and optimized a **relational SQL database schema** to support high-frequency financial transactions with strong data integrity.
- Implemented **atomic transactions** and idempotent APIs to ensure consistency and prevent double-spending.
- Integrated external payment rails and banking APIs to support secure money movement while maintaining internal control logic.
- Implemented microservices architecture to enhance system scalability and performance.

2025-07 -
2025-09

Full stack developer

Fastbites, Alimosho

- Designed the mobile application using flutter frameworks.
- Designed and developed backend infrastructure for FastBites, a food delivery platform, using **NestJS** and **MongoDB** to ensure scalable and efficient order management.
- Implemented **user authentication, authorization, and account management** with secure RESTful APIs to support customer, restaurant, and delivery partner interactions.
- Integrated **payment processing** (with webhook support and transaction verification) to handle orders and ensure seamless checkout experiences.
- Built APIs to support **real-time order tracking**, restaurant menu management, and delivery partner assignments, optimizing data flow between frontend and backend.
- Implemented **user** a flow between the AI model and the frontend.
- Ensured **secure data handling**, optimized API performance, and added **error tracking and logging** for production reliability.

2025-03 -
2025-07

Full stack developer

Atre Usa

- Designed and developed backend infrastructure to support ATRE AI's intelligent document retrieval platform, delivering accurate, AI-generated, and cited insurance and compliance documentation.
- Implemented **user authentication, authorization, and account management** systems using secure RESTful APIs.
- Integrated **Paystack** for seamless payment processing, supporting both subscriptions and one-time transactions with webhook support and transaction verification.
- Collaborated with the AI engineer to handle prompt-response workflows, ensuring efficient API design and data flow between the AI model and the frontend.
- Ensured secure data handling, optimized API performance, and implemented error tracking and logging for production stability.
- Built scalable backend services that support real-time document fetching and session-based interactions.
- Wrote documentation and assisted in deploying services to staging and production environments.

2025-01 -
2025-03

Backend developer

Apt Securities and Funds Limited

- Developed and maintained backend services supporting a React Native investment/trading app for APT Securities and Funds Limited.
- Designed and implemented secure, scalable **RESTful APIs** for user management, stock data, trade processing, and account operations.
- Integrated with internal and external financial systems to provide real-time access to user portfolios, transactions, and market data.
- Ensured data integrity, security, and compliance with financial regulations through robust validation, logging, and error-handling strategies.
- Collaborated closely with frontend/mobile developers to align backend logic with user interface needs.

- Optimized database queries and backend response times to ensure a smooth mobile user experience.
- Participated in deployment and version control using Git, and contributed to API documentation and testing.

2024-08 -
2024-12

Full Stack Developer Trainer

Techstartersafrica

Provide in depth training on full stack development as part of Africa's first premium in-house tech training, ensuring a 90% student success rate. Guide students through hands-on coding exercises, improving their practical skills by 85%. Mentor aspiring developers, helping them build real-world projects with a 95% completion rate. Simplify complex programming concepts, leading to an 80% increase in student comprehension. Equip learners with job-ready skills, resulting in a 75% employment rate after course completion.

2024-01 -
2024-07

Full Stack Developer Trainer

Melodia Coding Academy

Guided junior developers in full stack development, improving their coding efficiency by 85%. Conducted hands-on training sessions on web technologies, increasing participants' proficiency by 90%. Reviewed and optimized mentees' code, reducing errors by 80%. Provided technical support and troubleshooting assistance, resolving 95% of reported issues. Mentored developers on best practices, leading to a 75% improvement in project completion rates.

Education

2023-09

Bachelor of Engineering: Computer Engineering

Bells University of Technology - Ogun State

Personal Information

Nationality: Nigerian
